ROLLER SKATES
FOOT SIZE METER

WHAT SIZE OF ROLLER SKATES DO I NEED ?
Your foot is the reference we should work with. Please check the sizing tables on this and double check – print out the sheets and put both feet on it. Then look how much toe space you would need. It depends a lot of your foot shape. The insoles are just the basis of the boot. It is not a tool to determine the width but it really helps to find the right size. At the toe joints (ball area) the foot may overlap the insole, it is nothing unusual.

For adult leisure skaters we recommend :
Narrow feet = 0,5 cm – 1 cm
Wide feet = 1 cm – 1,5 cm

Our boots are slightly pointed at the very front (toe cap) – so this has to be taken into account.

WHAT ABOUT THE WIDTH OF STREET BOOTS?
These boots have only one width **C** (wide). Since they are soft, you adjust by lacing – loose for wide feer, tight for narrow feet.

Please recheck length after printing (transmission deviations)!

INSOLE LENGHT
27,7 cm
